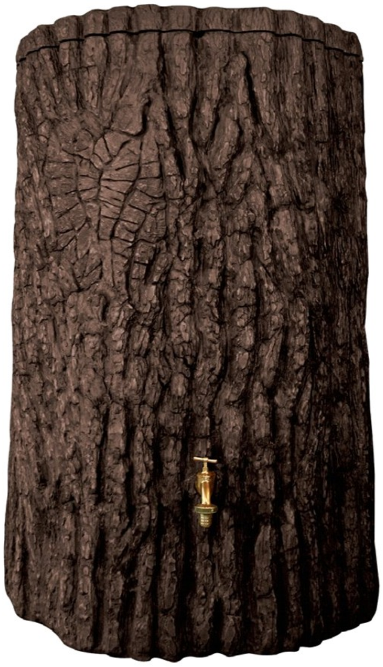
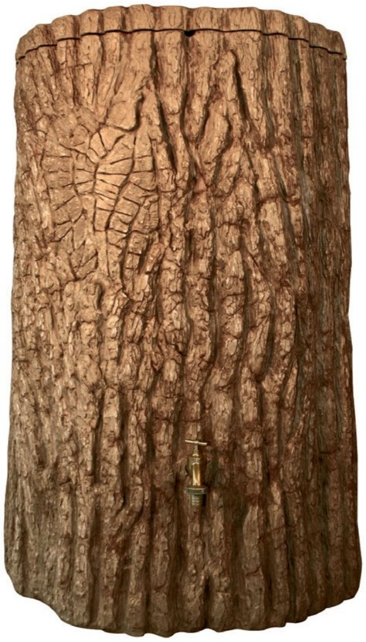
# 3P Evergreen Tanks

3P Technik

# Item #9000580-5



Item #9000580



Item #9000585

Unlike a typical rain barrel, the 3P Technik Evergreen has a design of a unique rainwater tank styled from an old German Oak tree trunk. A highly realistic finish was obtained through a special weather-proofing treatment of the PE material; it’s so realistic it’s hard to separate from the original. With a huge volume of 475 l or 125 gal. you have an excellent rainwater supply for small and medium-sized gardens. The 3P Rainwater Tank “Evergreen” has two 3/4 in. BSP connections and one on the front, where a water tap can be screwed in and one as a side outlet for emptying the tank in winter periods or to inter-connect several tanks. There is a child safety lock integrated within the lid.

Blends in with surrounding foliage

Includes brass spigot

Made of food quality polyethylene

German made, high quality construction

Links to other barrels/tanks for increased capacity

Reduces water costs and the strain on water consumption

Dimensions in inches:
